Responsive to Home's request, Dept 30th informed British Embassy in brief outline of (a) President's discussion with Ben Gurion re Dimona reactor and (b) findings of US scientists who visited Dimona May 18-22 as follows:

1. Observations of US scientists who visited Dimona indicate that reactor is of size and character described by Israelis. Reactor will not be in operation for at least two years and possibly three.

2. Ben Gurion informed President Israel's interest is to acquire training and experience in anticipation of a time when atomic energy can produce cheap power. Israel is particularly interested in utilizing atomic energy for desalinizing sea water.

3. Ben Gurion said US could make known its conclusions re Dimona as it chose.

4. Ben Gurion agreed in principle to future visits by "neutral" scientists.

British Embassy was informed that in view favorable nature these developments it is our view no useful purpose served by Lord Home.
pressing Ben Gurion heavily on nuclear program although probably Ben Gurion would anticipate some expression of interest in view of past discussions between UK and Israel on subject.

In response to Embassy question, Dept expressed hope British would not rpt not find it necessary at this stage to reveal to Ben Gurion that we had supplied details of conversation with President.
